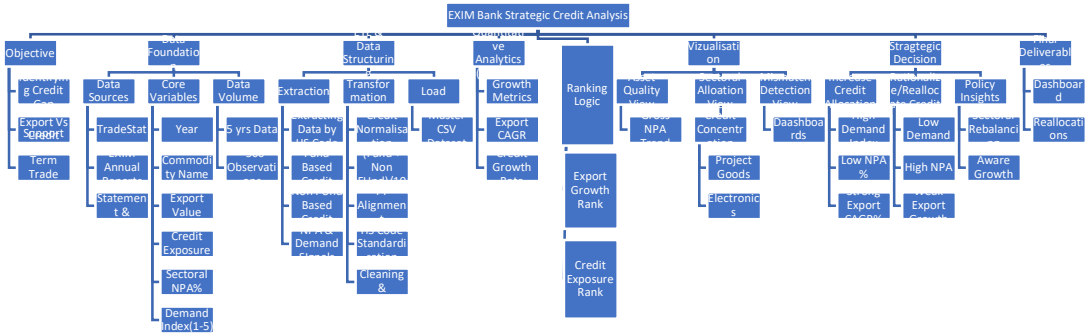
The Core Idea:

"Alignment Analysis": We are testing a hypothesis: *EXIM Bank is structurally backwards-looking*

The questions we are delving into the project:

1. Where is EXIM Bank putting its money? (e.g., "50% of loans go to Engineering goods").
2. Where is India's export growth actually happening? (e.g., "Electronics exports are growing at 32%, but only get 5% of loans").
3. The Mismatch: Which sectors are "Underfinanced" (High growth + Low credit) and which are "Legacy Brands" (Low growth + High credit)?



M

EXIM Bank Strategic Credit Analysis

1. **Phases of Project**

   [Phase 1: ETL & Data Structuring]

   - Task: Vertical stacking of 5-year TradeStat and Annual Report data.
   - Output: Master CSV (~500 records , 7 Columns).

   [Phase 2: Quantitative Analysis (Python)]

   - *Task:* Calculate Export CAGR vs. Credit Growth.
   - *Output:* Identification of "Under-funded" high-growth sectors.

[Phase 3: Visual Intelligence (Power BI)]

- *Task:* Map Risk (NPA) vs. Reward (Demand Index).
- *Output:* Strategic Mismatch Dashboard.

[Phase 4: Strategic Recommendations]

- *Task:* Propose Credit Reallocation Model.
- *Output:* Gap Analysis and changes to be made

2. Data Dictionary (HS 01 - 99)

This table defines the logic for the "Concrete Data" to be filled in your document for the 2020–2025 period.

Column	Name	Definition	Source
Col 1	Year	Fiscal Year (2020-21 to 2024-25)	Annual Reports
Col 2	HSCode	Harmonized System Code (01-99)	TradeStat
Col 3	Commodity	Name of the Export Product	TradeStat
Col 4	Export_Value	Total Revenue (INR Cr)	TradeStat
Col 5	Credit_Exposure	Bank Commitment (INR Cr)	Table DF-3
Col 6	Sectoral_NPA_%	Default Risk per industry	Page 167 Disclosures
Col 7	Demand_Index	Future Potential (1-5)	MD's Statement

3. Core Analytics Logic

To achieve a "no error" result in the analysis, the following formulas must be applied :

1. **Credit Normalization:**
   - *Formula:* (Fund-based + Non-fund based) / 10…calculated and added to the dataset via formula

     Example: FY 2024-25 (HS-84: Engineering Goods)

     - Fund Based: ₹ 1,941.15 Cr
     - Non-Fund Based: ₹ 1,024.84 Cr
     - Value for Column 5: ₹ 2,965.99 Cr

2. **Strategic Priority Score:**

- *Formula:* (Demand_Index * 0.7) - (NPA_% * 0.3)
- *Purpose:* Ranks sectors by their "Investment Worthiness."

3. **The Mismatch Indicator:**
   - *Logic:* If Export_Growth_Rank < 10 AND Credit_Exposure_Rank > 50, flag as **"Strategic Funding Gap."**

4. Planned Visualizations (For Power BI)

- **Asset Quality Trend:** A line chart showing the bank's Gross NPA
- **Sectoral Concentration:**
- **The Mismatch Scatter Plot:** Export Value (X) vs. Credit (Y), with bubbles colored by NPA status.
